Probability = 1.0

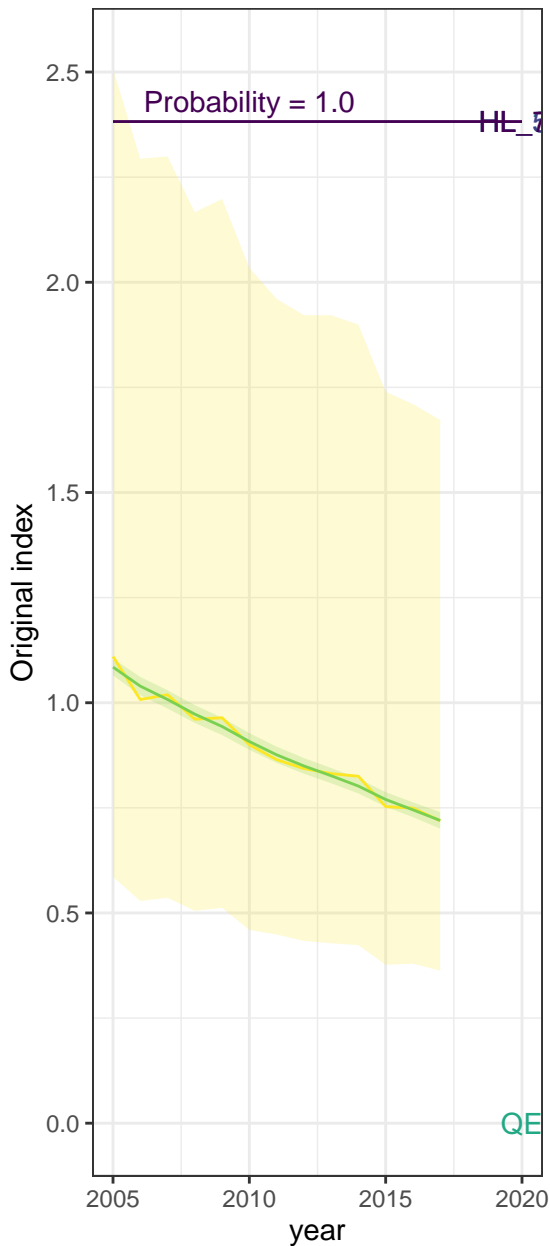

year

2005 2010 2015 2020

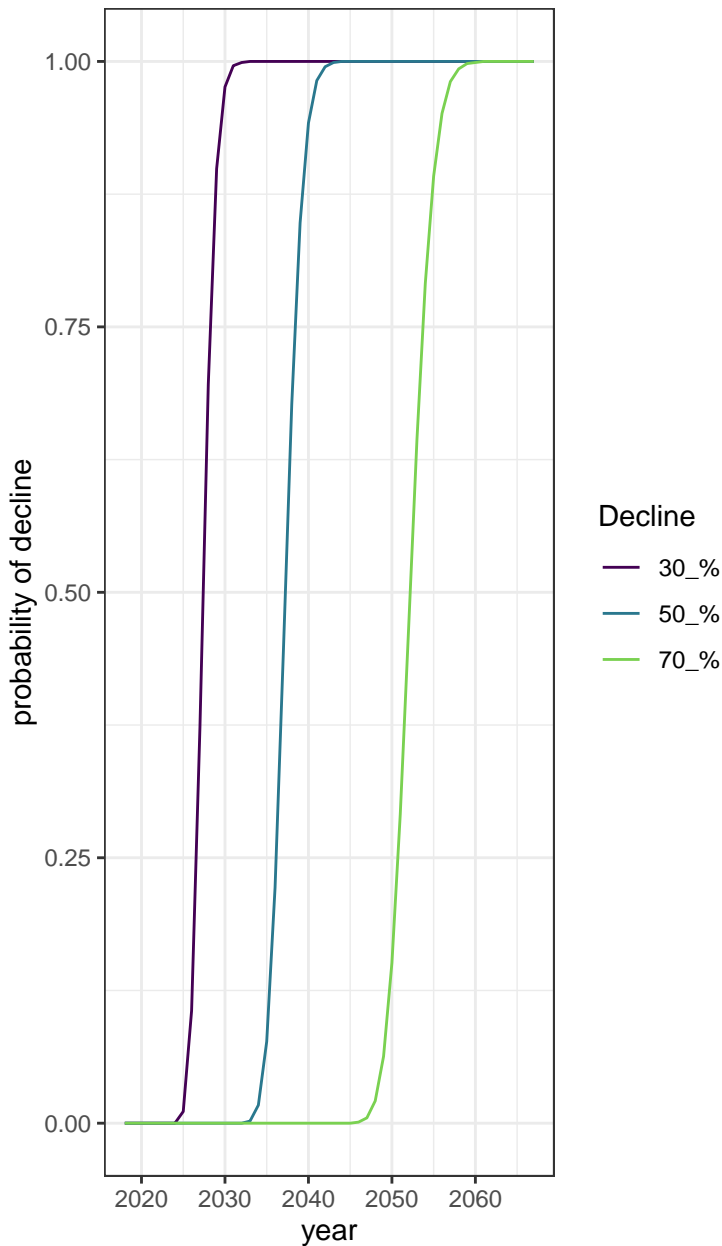

The graph displays the probability of decline over time for three different scenarios. The x-axis represents the year, ranging from 2020 to 2060. The y-axis represents the probability of decline, ranging from 0.00 to 1.00. The three scenarios are: 30% decline (purple line), 50% decline (teal line), and 70% decline (green line). All three scenarios show a probability of decline of 0.00 until approximately 2055. After 2055, the probability of decline begins to increase slightly for all scenarios, with the 30% decline scenario reaching the highest probability of about 0.01 by 2065, followed by the 50% decline scenario at about 0.005, and the 70% decline scenario at about 0.002.

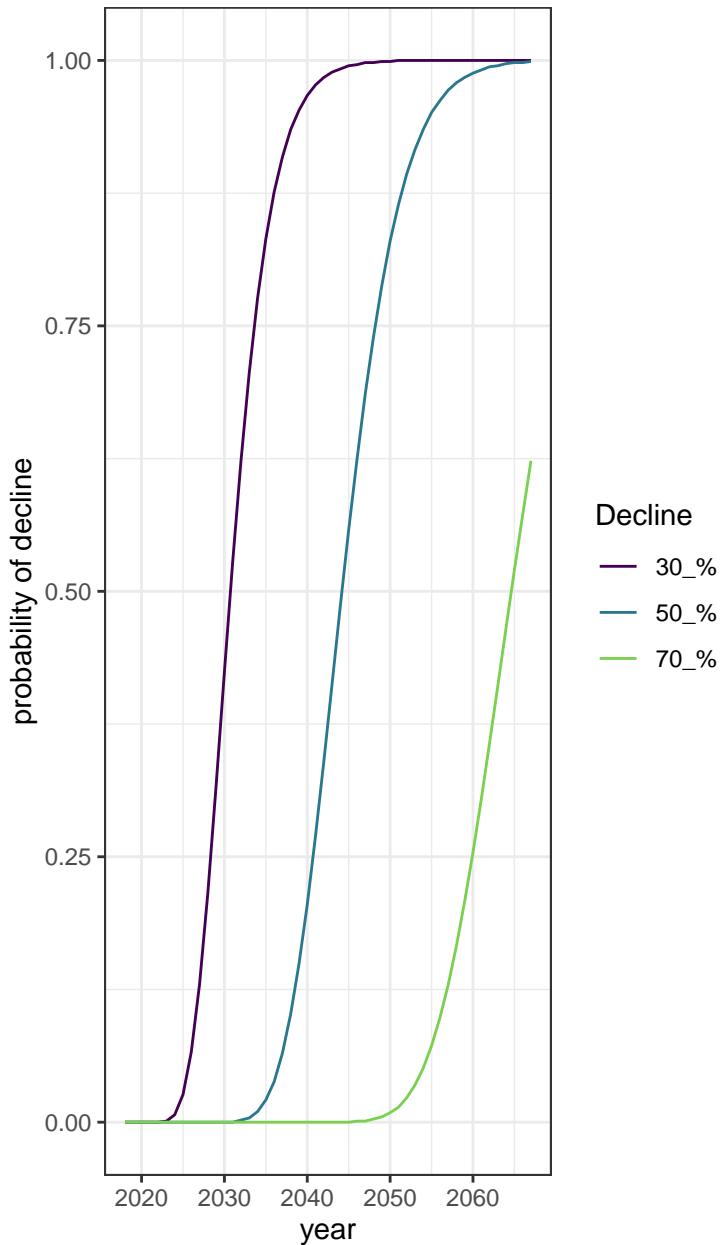

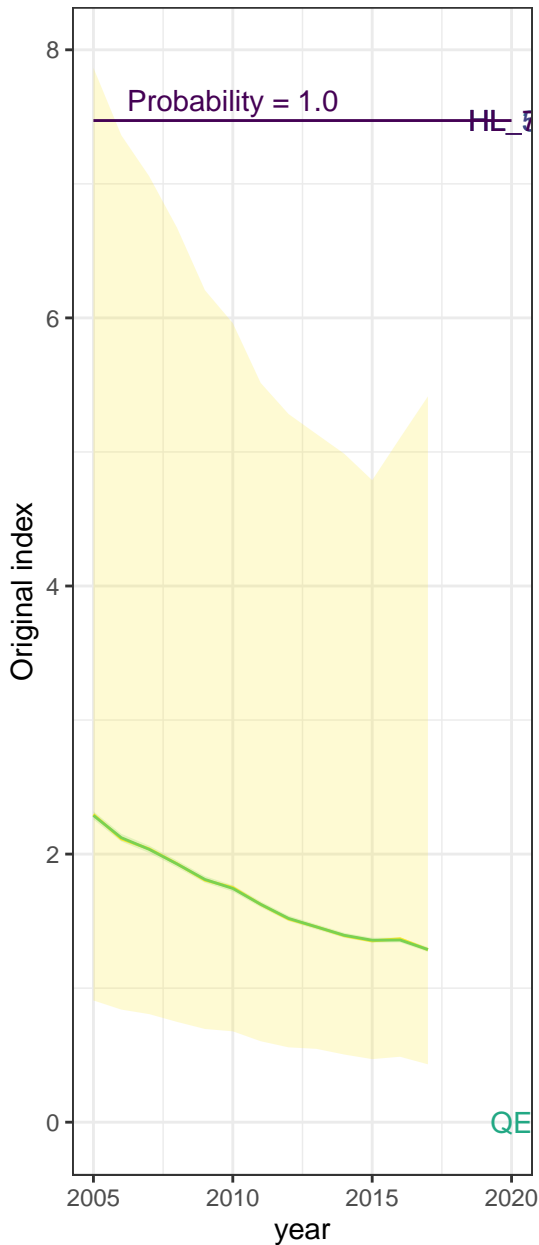

Figure 1 is a line plot showing the probability of a high level of trust (HL) in the EU over time (year) from 2005 to 2020. The plot features a yellow shaded area representing the probability distribution, a green line for the mean, and a purple line for the high level of trust (HL). The HL is constant at 1.0. The mean probability starts around 0.25 in 2005 and gradually decreases to about 0.15 by 2020. The yellow area shows significant fluctuations, with peaks around 2010 and 2014, and troughs around 2009 and 2015.

The graph displays the probability of decline (Y-axis, 0.00 to 1.00) against the year (X-axis, 2020 to 2060). Three curves represent different decline rates:

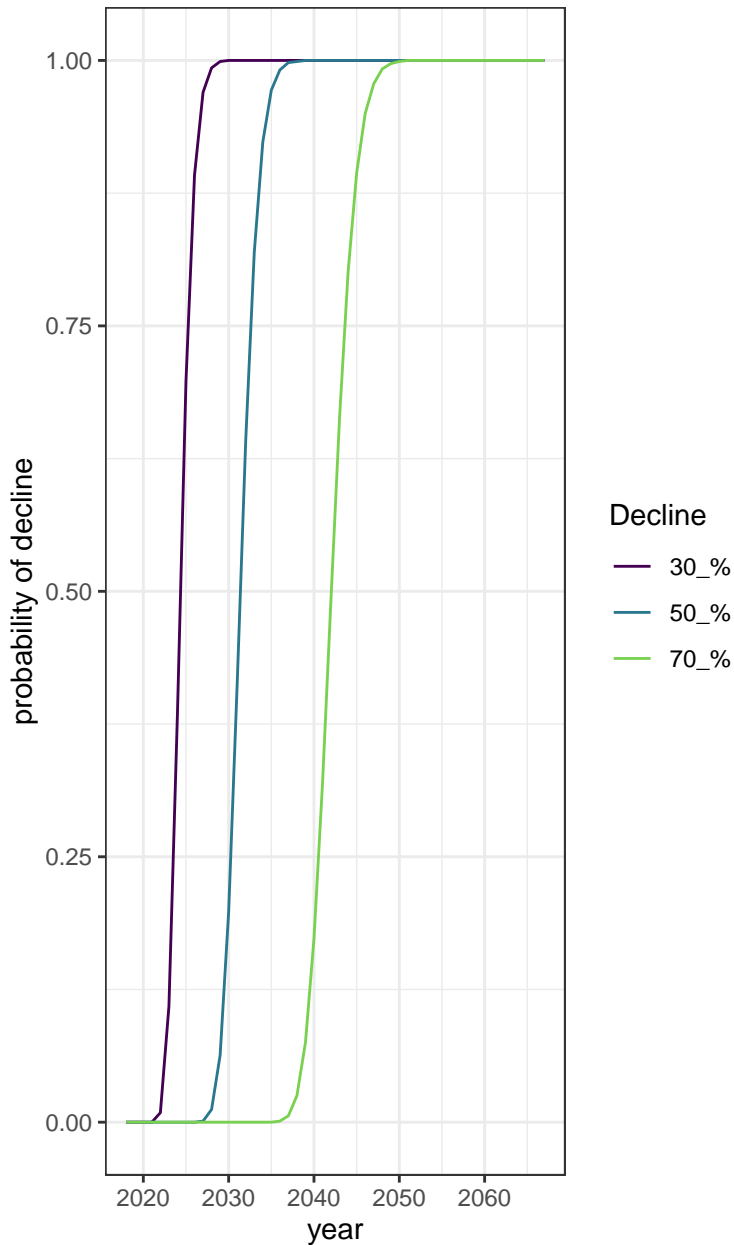

- 30_% (Purple line):** Shows a rapid increase in the probability of decline, starting around 2028 and reaching 1.00 by approximately 2065.
- 50_% (Teal line):** Shows a slower increase in the probability of decline, starting around 2045 and reaching 0.75 by approximately 2065.
- 70_% (Green line):** Shows a constant probability of decline at 0.00 throughout the entire period from 2020 to 2065.

Year	30_% Probability	50_% Probability	70_% Probability
